CASE STUDY

Project delivery: 2022

Customer

Major energy company

Product

1,500 BUDI Boxes Assembled Annually by Alcadon's Production Department

CUSTOMER NEEDS

At installation sites, there is a higher risk of errors if assembled products are not produced and standardized consistently. The customer therefore requires 'plug and play' products ready for installation with uniformity to minimize errors while enabling quicker installation for end users.

SOLUTION

- In collaboration with Alcadon, the customer specifies the desired product. The solution is tested and, in cooperation with the manufacturer (CommScope), the final product configuration for the customized BUDI box is approved.
- The customer orders the 'plug and play' solution as needed based on the agreed product configuration.
- The task is allocated to the appropriate production team or staff member, who completes the job.
- The finished product, including documentation, is shipped to the customer's warehouse in batches of 18-144 units and subsequently sent to the installer/contractor for final installation.

ADVANTAGES FOR THE CUSTOMER

- Consistently assembled BUDI boxes minimize the risk of errors and enable quick installation for end users.
- The customer saves on training new employees/contractors since the BUDI box arrives assembled and equipped.
- Collaboration between the customer, manufacturer, and Alcadon enables easy reconfiguration of the product at a later stage.
