Alcadon

Customer

Installer Company

Product

10 ODFs Assembled in Alcadon's Production

CUSTOMER CHALLENGE

Lack of uniformity in finished products can cause challenges during installation, service, and repair for end customers/on-site. The customer also wanted to optimize the installer's on-site time, ensuring time is spent on installation rather than assembly or equipment preparation.

SOLUTION

- The installer company specifies the solution to Alcadon.
- Alcadon confirms specifications, price, and delivery date.
- The task is assigned to the appropriate production team, who initiates and completes the job.
- The finished product, including documentation, is sent to the installer, who ensures on-site installation for the end customer.

ADVANTAGES FOR THE CUSTOMER

- Uniformly assembled ODFs enable quick and trouble-free installation for the end customer.
- Minimized on-site time for installers = cost savings for the installer = increased profitability.
- Production facilities allow all types of specialized solutions within fiber termination.
